ROLL UP GUARDING

Shaver's roll up guards are made from long-lasting materials including Vinyl Coated Polyester, Hypalon, and Neoprene and consist of flexible barriers that can be easily extended or retracted as needed. Used to prevent accidental contact with moving parts while also allowing for quick access to the work area, roll up guarding is ideal for applications where space is limited and frequent access is required. Shaver offers three types of roll up guarding:

- ✓ Light Duty
- ✓ Medium Duty
- ✓ Aluminum

SHAVER INDUSTRIES INC.

MAINTAINING THE LONGEVITY OF INDUSTRIAL EQUIPMENT

As industry leaders in machine protection solutions, Shaver Industries offers a wide range of products that are designed to address unique challenges within your work environment. Our bellows, way covers, roll up guarding, and lift table enclosures protect costly machinery from a variety of contaminants.

FABRRIC BELLOWS

Shaver's fabric bellows are built to shield delicate components like ball screws, linear guides, and spindles from environmental contaminants that can cause wear and tear while accommodating the movement of machine parts.

OUR BELLOWS:

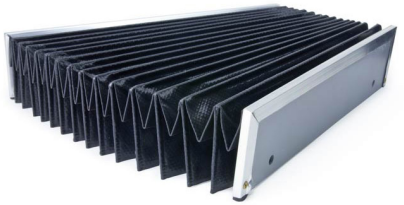
- ✓ Protect against dust, debris, and other contaminants
- ✓ Use durable fabric that resists oil, coolant, and other chemicals
- ✓ Withstand temperatures from -40°C to 1000°C
- ✓ Customizable to fit any machine

LIFT TABLE ENCLOSURES

Shaver Industries has been designing and manufacturing lift table skirting for over 30 years. These enclosures help to prevent accidental contact with moving parts and protect the lift table's mechanisms and hydraulic components from dust, debris, and other environmental factors. Built with tear resistant, heavy-duty vinyl, our heat bonded lift table enclosures can withstand the most rigorous conditions.

FABRIC WAY COVERS

Shaver's fabric way covers feature Advanced Thermic Bonding which prevents wear and tear and provides reinforced strength, increased rigidity, and aesthetic appeal.



Resisting temperatures from -40°C to 1000°C, our way covers help maintain the accuracy and smooth operation of machinery by preventing damage to the critical surfaces of the machine's guide ways.

ENHANCING EMPLOYEE SAFETY

Preventing Accidents: By covering hazardous components, these products significantly reduce the risk of accidental injuries.

Maintaining a Cleaner Work Environment: By containing dust, debris, and harmful substances, they help create a safer and more sanitary workplace.

Enhancing Operational Efficiency: Safe and well-maintained machinery operates more reliably, reducing the likelihood of unexpected malfunctions that could lead to safety issues.
